

# Player Perennial Ryegrass

## Advanced Synthetic Variety

Player is used as a dark green permanent turf in cool season zones as it withstands many of the diseases that affect perennial ryegrass under hot, humid conditions due to its superior growth and development.

## Excellent Transitional Ryegrass

Used to facilitate better spring transition to Bermudagrass in overseeding on southern golf greens, tees, fairways and lawns. It is also a proven performer for parks and athletic facilities. It can be used as a blend or as a stand alone variety.

## Performance

Delivers optimum summer performance and performs well in most soils.

## Key Characteristics

Player's attractive appearance, fade resistant color, is due in part to its reduced plant stress and reduced leaf shred.

### Fairway Treatment
