

CHARACTERISTICS

Developed in conjunction with the University of Rhode Island, the newest generation of the best-known name in Fine Fescue is here. **Jamestown IV** Chewings Fescue carries the lineage of Jamestown into the future with improved disease resistance, darker color, superior overall turf quality and the ability to tolerate low height of cut.

Jamestown IV features a level of cultivar stability that you'll notice years after the initial germination. Years of careful polycross tracking and ancestry verification confirms that **Jamestown IV** is the ideal variety for golf courses, parks, commercial and residential properties.

Jamestown IV has shown excellent resistance to both grey and pink snow mold and also has shown resistance toward dollar spot and red thread.

VARIETAL PERFORMANCE

Growth Habit	Bunch Type
Establishment Rate	Fast
Nitrogen Requirements	Low
Mowing Height (Relative to Species)	Low
Drought Tolerance	Good
Wear Tolerance	Low
Shade Tolerance	High
Approx. Seeds Per Lb.	600,000

SEEDING RATE

4-6 LBS/1,000 square feet

BENEFITS

- Lush, Uniform Turf
- A dark green color
- Excellent mowability
- Good overall disease resistance
